

Phrases “Nverb” Nol

In the Nol we have verbs despite we did not consider sometimes necessary to use them. A message can pass on in a new conceptual syntax from the emitter to its receiver and being received with greater meaning than a message with a syntax of traditional use. Semantics Nol are well defined, soon allows to release the syntax to choose new forms to communicate to us. We see: **Y is noz T** = I would like meet you. I took the 4 specific concepts from the message: (I, Wish, Knowledge, You) and for my receiver there is no doubt than I am communicating to him (as long as he knows the code, that is to say the Nol) and in this new syntax I have not needed to serve to me as verbs. We speak of “nverb” when we used nouns to assume the function that usually carry out the verbs. If it had used a syntax using the verbs it had to write more characters without no necessity.

(Attention! The brevity of verbs Nol, for instance of a single syllable or of two vowels is not object of Nverb)
